

Regroup Troop

Materials needed:

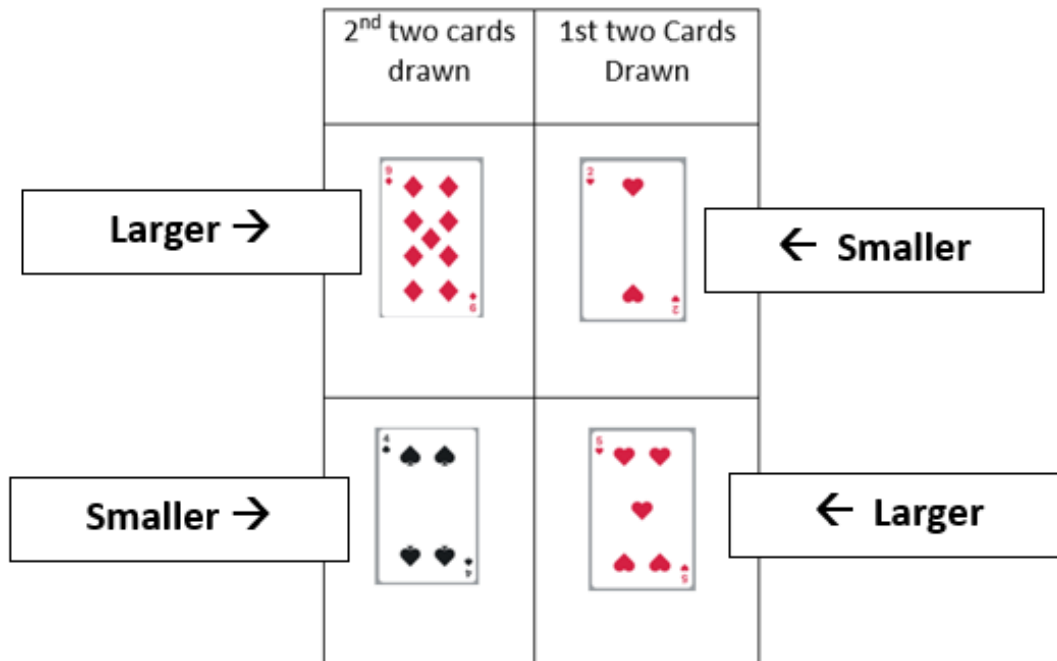

- Deck of Cards. Face Cards Removed. A= 1
- Dry erase boards/markers/erasers

To play:

Players each draw two cards, placing the smaller number on top and the larger number on the bottom. Next, each player draws another two cards. This time, the larger number goes on top, to the left of the first number. The smaller number goes on the bottom, to the left of the second number. Now the student is presented with a 2-digit by 2-digit subtraction problem and must practice regrouping!

Odd difference gets 1 point, even difference gets 2 points. 1st player to get 10 points wins.

For example:

The problem would be $92 - 45 = 47$. 47 is odd, so this player gets 1 point.
